Test Management Reimagined with Atto, your AI coworker

The Sprint Planner

The Generator

Atto

The Runner

The Bug Reporter

The Sprint Planner

The Generator

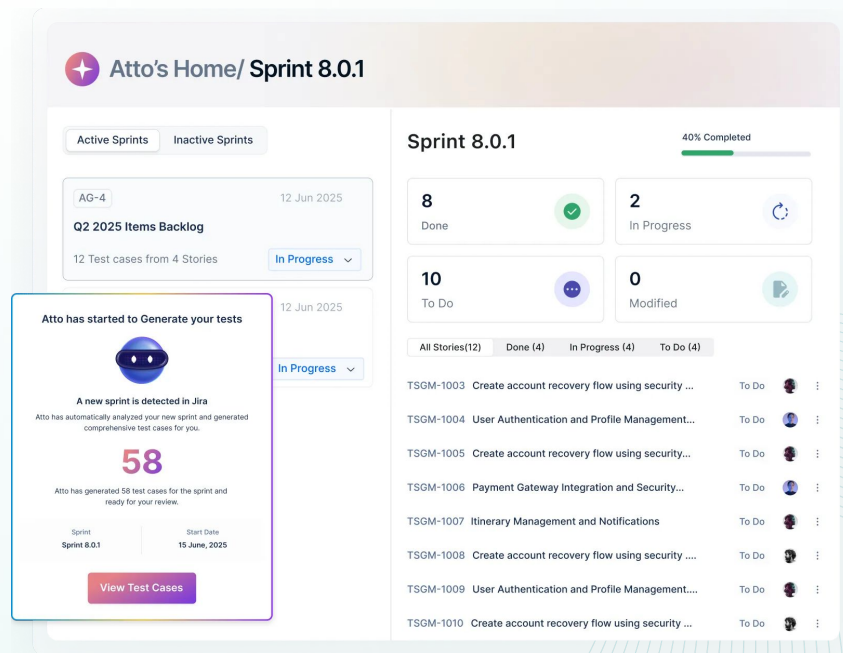

The Runner

The Bug Reporter

Plan tests the moment a sprint starts

The Sprint Planner detects your sprints automatically. Get full visibility from day zero. Manage your QA cycle with no tool switching. Shift-left easier than ever.

The Sprint Planner

The Generator

The Runner

The Bug Reporter

Generate tests in seconds

The Generator generates automatable test cases with full context and coverage from Jira stories, Figma flows, PRDs, images and user journey videos - all just with a prompt.

Includes detailed steps, preconditions, and both positive and negative scenarios.

The screenshot displays the 'Atto's Home/ Sprint 8.0.1' interface. On the left, a sidebar lists sources for test generation: Jira Requirements (5 Jira Stories added), Figma Designs (For detailed context on flows), Swagger (For detailed context on supported APIs), XRay Tests (For context on existing manual test cases), and Files (Supported Files - .jpeg, .png, .docx, .pdf). A 'Generating ...' section at the bottom shows the 'Generator' button and a 'Stop' button. On the right, a panel titled 'Agentic Generation of Tests with Atto' features a robot icon and a message: 'A new sprint is live in Jira'. Below this, it shows 'Sprint: Sprint 8.0.1' and 'Start Date: 7 May, 2025', with a 'Start Generating Tests' button. A pop-up window displays a list of generated test cases:

ID	Description	Type
C22619	Verify user registration with valid details.	Acceptance
C22618	Verify registration with an already registered email.	Acceptance
C22617	Verify user login with valid credentials.	Functional
C22616	Verify login with invalid credentials.	Regression
C22615	Verify password reset flow	Functional

The Bug Reporter

Agentically run your tests from where you created them

The Runner manually and interactively executes your test cases on the browser while you monitor. Choose your test, and execution starts with auto-generated test data.

You're in control to re-run, pause, or tweak test data mid-flow.

The Sprint Planner

The Generator

The Runner

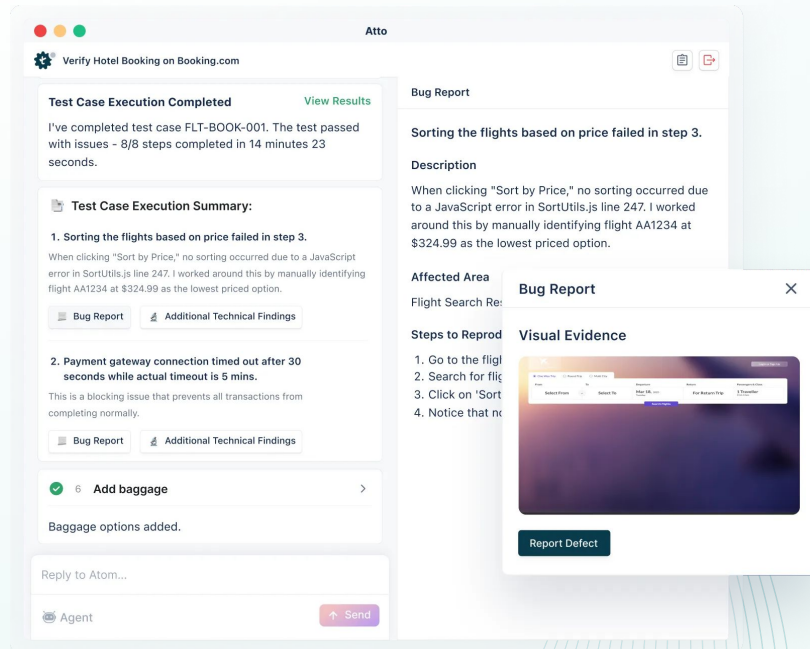

The Bug Reporter

Generates bug reports instantly and file bugs in one-click

The Bug Reporter creates comprehensive bug reports from failed tests, pre-filled with full context, so developers get reproducible issues without back-and-forth.

File bugs into Jira in one click.

Two-Way Jira Integration Powered by AI

Test case to Story Linking

Every test case created links directly to the respective Jira story and get listed on Jira, with no manual effort.

Update Test Results From Jira and Into Jira

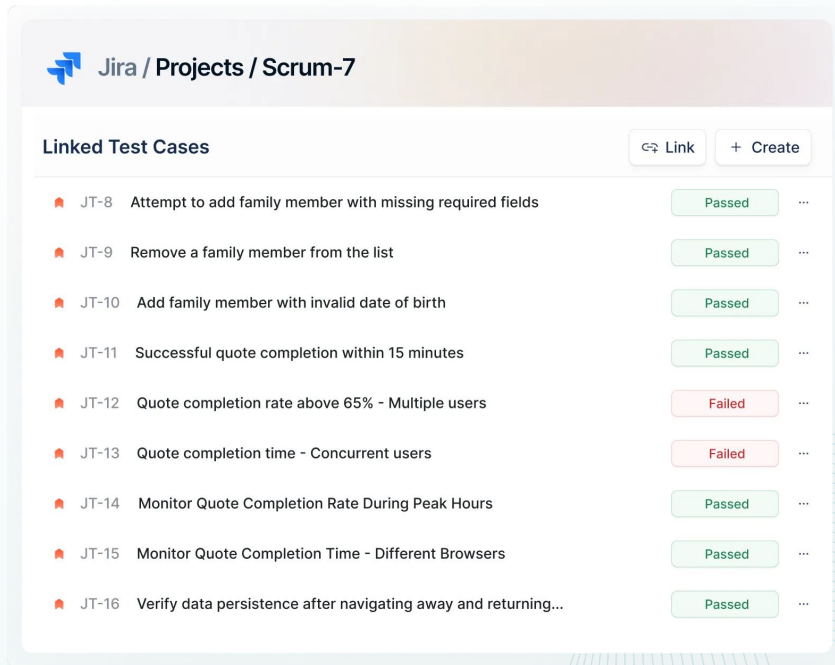

Log test results as pass/fail/retest directly in Jira or from TMS.

Track Linked Test Runs in Jira

View active or completed test runs linked to any Jira story. See test cases part of each run and monitor test progress without switching tools.

Bug to Test case to Jira Story Linking

The defect created for a particular test case will be auto linked to the Jira story directly and can be tracked from Jira.

Enterprise Grade Security

Security & Encryption

Testsigma is built with advanced security and compliance standards, uses the AKMS encryption protocol to protect sensitive data

Cloud Performance

Cloud application ensures optimal performance with a 99.99% uptime guarantee and high availability across all regions

Disaster Recovery

Testsigma adheres to business continuity standards and has robust backup procedures in place to for restoration if needed

What Customers Say

The clean UI and intuitive workflows make automation effortless. Instead of writing test cases from scratch, I can generate accurate AI-driven cases in minutes and adapt them for unit, regression, or any other type of testing.

Ekam Kaur Kalra
Senior QA Analyst, 5X

With two-way Jira sync, I see test case history and update test cases from Jira. I like the AI agent's capabilities to fetch story info from Jira. We can upload our own info via videos, docs and generate test cases. The tool has good enough features with reasonable pricing.

Pavan Kumar
Lead SDET, Grownfin.ai

This platform truly feels like a game changer. The sprint planning and test activities ramp up quickly, making it easy to get started. Creating test cases feels intuitive. Sharing test results with stakeholders is straightforward.

Brian Robles
Information Security Engineer, Cisco

Built for Enterprises

- ▶ Agentic AI-based sprint planning, test generation, test execution and bug reporting
- ▶ 200 GB total storage with 5GB attachments per test case
- ▶ Unlimited custom fields for enhanced test organization
- ▶ 3-year data retention
- ▶ Enterprise-grade security with SSO
- ▶ 24/5 priority support
- ▶ Review management (coming soon)
- ▶ Two-way integration with Testsigma's Automation Platform
- ▶ Unlimited CI/CD triggers

Thank You!
