

Two decisions made under real constraints, and a plan I deprioritized.

The case studies on my site are finished work with results attached. These two are different: real decisions and real thinking, shown without a tidy result attached. Including them here because a growth role should care as much about how someone reasons and sets priorities as it does about the polished wins.

Removing Google SSO from signup

27.8% of users who clicked Google SSO on the signup page went on to activate a trial. The other 72.2% didn't.

Testsigma restricts trial signups to business email domains, to keep the funnel clear of throwaway personal accounts. Google SSO is the path of least resistance for signing up anywhere, so it pulled disproportionate clicks, and, downstream of the domain restriction, disproportionate rejections, from people whose Google account wasn't tied to a business domain.

The decision: remove Google SSO from the signup page entirely. The logic was that routing everyone through manual email entry surfaces the domain requirement earlier, before someone commits to a flow they can't finish.

I don't have the after-number. Forcing manual email entry could just as easily lose someone at an earlier point in the funnel who would've pushed through the OAuth flow, rather than converting them. Before calling this a clean win, I'd want signup-start volume instrumented alongside activation, not just the SSO click-to-activation number I had.

A lifecycle-stage marketing plan I scoped and deprioritized

The plan mapped distinct lead states, from MQLs marketing was asked to nurture, to leads stuck after multiple failed contact attempts, to people who'd only downloaded an asset or sat through a webinar, to a staged sequence designed to move each one toward a demo booking, with explicit PMM and BDR ownership at every step.

NURTURE-FLAGGED MQLS

ATTEMPTED-TO-CONTACT MQLS

NO-REPLY MQLS

CERTIFICATION-ONLY LEADS

ASSET DOWNLOADERS

WEBINAR ATTENDEES

Each segment had its own drip cadence in HubSpot, a handoff point to BDR outreach, and a defined "expected outcome": re-engagement, a booked demo, or a status change in Salesforce, rather than one generic nurture track applied to everyone.

I scoped and drafted the full plan, then deprioritized it against work with a clearer near-term payoff. The full document is attached alongside this one as a work sample of the thinking, not as a result, I'd rather be direct about where it stands than describe it in a way that implies it's already running.

→ The full plan is attached separately as "Lifecycle_Stage_Marketing_Plan_-_Testsigma.pdf."
